

THE RG-07 BROADCAST RADIO COMMUNICATION DEVICE IS USED TO ORGANIZE ONE-WAY, WIRELESS SPEECH TRANSMISSION ACROSS SHORT DISTANCES.

To create a group, you will need to “link” several receivers to the transmitter.

LINKING PROCEDURE:

- 1** Power on the **transmitter** to which the receivers will be linked.
- 2** Hold down the top button on the **transmitter**.
- 3** On the **receiver**, press and release both buttons simultaneously. The **receiver** should receive a built-in command from the **transmitter** and move onto the appropriate channel. Information about the channel (its frequency number and transmitter code) are stored in the receiver’s nonvolatile memory.

TO CONDUCT A TOUR:

1 Insert the headset plug into the jack at the top of the **transmitter**.

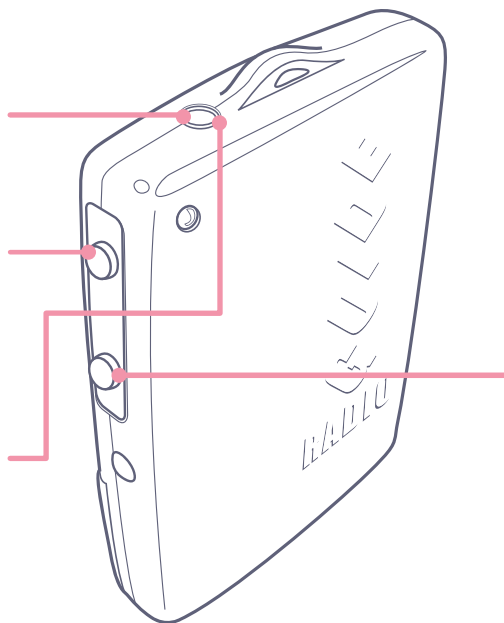

2 Power on the **transmitter** by pressing the top button.

3 Insert the headphone plug (up to the rubber stopper) into the jack at the top of the **receiver**.

4 The **receivers** will power on after any button is pressed or within 40 seconds after the **transmitter** is powered on.

5 To adjust the volume, use the buttons on the left-hand side of the **receiver**. The top and bottom buttons increase and decrease the volume, respectively.

6 After the tour, turn off the **transmitter** by pressing the lower button. The LED light on the transmitter should turn off.

7 The **receivers** turn off automatically after not receiving a **transmitter** signal for more than 10 minutes.
